

Homework 3

Abolfazl Hoseini, Hannane Montazer, Ashkan Shakiba

Question:

3.2. Describe agility (for software projects) in your own words.

Answer:

Agility is the process of the ability of the team to change its own working procedures with the constant goal of increasing value to the company while minimizing waste. It is the state of the agile method.

Hence, the agility involves following modifications:

Modifications to the product being developed and also the team members.

Any modifications that will have an impact on the products they create or the projects that produce the products.
